

Real-Time Inflation-Adjusted SIP Calculator | *C#, .NET, RESTful API, Async/Await, JSON* (Independent Project)

- Delivered accurate 30-year SIP projections with live inflation adjustment by integrating the World Bank CPI API via HttpClient, improving output accuracy over static models by ~25%.
- Eliminated UI blocking entirely by implementing async/await patterns, reducing perceived response latency from ~3 seconds to near-instant during live API calls.
- Reduced invalid-input crashes to zero by engineering a custom exception-handling framework (ZeroAndNegativeException, InvalidYearException) built on algorithmic guard-clause patterns.

Console-Based Banking System | *C#, .NET, Factory Pattern, OOP, SOLID Principles, xUnit* (Independent Project)

- Reduced account creation code complexity by 60% by implementing the Factory Design Pattern, abstracting runtime instantiation of Savings and Current account objects and making the system extensible without modifying core logic.
- Prevented 100% of invalid transactions in test scenarios by engineering a custom exception-handling framework (InsufficientBalanceException, DuplicateAccountNumberException) with business-rule constraints enforced at the data structure level.

TECHNICAL SKILLS

Primary Skills: C#, .NET 8, ASP.NET Core, **Data Structures & Algorithms, System Design**

Backend & APIs: RESTful APIs, Entity Framework Core, Microservices, JWT/RBAC, Asynchronous Programming

Testing & Quality: xUnit, Unit Testing, Integration Testing, TDD, SOLID Principles, Design Patterns (Factory, Singleton)

DevOps & Cloud: Docker, Kubernetes, GitHub Actions (CI/CD), AWS (EC2, S3), Git, Netlify

Databases: PostgreSQL, MySQL, MongoDB, Firebase

Languages: C#, JavaScript, SQL, Shell Scripting (Bash)

Tools: Visual Studio, JIRA, Linux/Unix

LEADERSHIP

Training & Placement Coordinator

During MCA

Asansol Engineering College

- Drove campus recruitment outcomes for the batch by coordinating with multiple companies, managing end-to-end logistics for placement drives, and acting as the primary liaison between recruiters and 100+ student candidates.

Department Representative – Computer Applications

5 Years (BCA + MCA)

Asansol Engineering College

- Represented the department to the NAAC Peer team during institutional accreditation, communicating academic and infrastructure highlights to national evaluators — contributing to the college's accreditation outcome.
